James E. Monogan III. 2015. Political Analysis Using R.

New York: Springer. Last update: April 28, 2020

Equation 5.6 on page 74 presents the formula for a Pearson correlation coefficient. There is a misprint in the denominator in that the deviations of x and y should be squared before summed. The correct version of Equation 5.6 should read:

$$r = \frac{\sum_{i=1}^{n} (x_i - \bar{x})(y_i - \bar{y})}{\sqrt{\sum_{i=1}^{n} (x_i - \bar{x})^2} \sqrt{\sum_{i=1}^{n} (y_i - \bar{y})^2}}$$
